TITLE K-12 Project in Career Development and Bridging the Gap Between School and Work; South Dakota's Exemplary Project in Career Education.

INSTITUTION Watertown Independent School District 1, S. Dak.

SPONS AGENCY Bureau of Adult, Vocational, and Technical Education (DHEW/OE), Washington, D.C.; South Dakota State Dept. of Public Instruction, Pierre. Div. of Vocational-Technical Education.

PUB DATE May 72

NOTE 13p.; For a final report on this project see CE 000 379

EDRS PRICE MF-\$0.65 HC-\$3.29

DESCRIPTORS *Career Education; *Educational Programs; Elementary Grades; Occupational Choice; School Community Relationship; Secondary Grades; *Vocational Development

IDENTIFIERS *South Dakota

ABSTRACT

South Dakota's exemplary project in career education at Watertown was designed to help students bridge the gap between school and work through an integrated program of occupational information, orientation, and exploration, and to provide an in-service program for counselors and teachers within the school district and statewide. The four phase project included: (1) in depth planning, policy and procedure development, and securing of resource materials; (2) orientation of the school district staff to the project; (3) implementation; and (4) data collection for evaluation. The rationale behind career education and its implications for the program are described briefly. (MS)

Exemplary Project
in
Career Education*

Funded by the U. S. Office of Education in
cooperation with the South Dakota Division
of Vocational - Technical Education, Pierre,
through the Watertown Independent School
District No. 1, Watertown, S. Dakota 57201

E. B. OLESON, STATE DIRECTOR OF VOCATIONAL - TECHNICAL EDUCATION
ROBERT H. COCKLE, SUPERINTENDENT OF SCHOOLS AND PROJECT DIRECTOR
CLAYTON D. CARLSON, PROJECT COORDINATOR

MAY, 1972

The Funding

Financed under Part D (Exemplary Programs and Projects) of the Vocational Education Amendments of 1968 (P.L. 90-576, Section 141). Congress defined the purpose of exemplary programs and projects "to stimulate, through federal financial support, new ways to create a bridge between school and earning a living"

The Objectives

The program is designed to help all students in the district bridge the gap between school and work through an integrated program of occupational information, orientation, and exploration, and to provide an in-service program for counselors and teachers within the school district and statewide.

The Approach

The Project is in four phases. The first included in-depth planning of activities, development of policies and procedures, and securing resource materials. The second phase involved orientation of the school district staff to the project, and defined the function of departments and individual staff members. Phase three encompasses implementation of the various programs. The final phase involves collection of data for program evaluation.

The Community

Watertown is a community of 14,000 population in the rolling agricultural plains and lake region of northeastern South Dakota. There are several small towns in the region, and Watertown serves as the major trade center for about 100,000 people.

The School System

Watertown has a public school population of some 3,900 in six elementary schools, one junior high school, and one senior high school. The Multi-District Career Center, originally a satellite program of the Career Development Project, enrolls about 500 juniors and seniors from Watertown and 11 area high schools in eight occupational areas. Students attend class daily in two-hour time blocks. The post-secondary Lake Area Vocational-Technical School has an enrollment of more than 500.

The Personnel

The Career Development Project has a professional staff of seven -- a coordinator, elementary and secondary curriculum specialists, two occupational counselors, a work experience coordinator, and an information specialist. There are 214 teaching positions in the Watertown school system, K through Vo-Tech, plus administrators, specialists, and aides.

Accountability

The Project is accountable to the U. S. Office of Education and the State Division of Vocational-Technical Education, through the Watertown school system. Staff members are considered employees of the Watertown district. The superintendent of schools, under the local board of education, is considered project director. Quarterly and annual Project reports are submitted to the U. S. Office of Education. The Project has the responsibility of disseminating career education information, resulting from Project activities, statewide and to share these results nationwide through individual requests, through the ERIC information network, and through other media.

The Implications

Career education is being emphasized by the U. S. Office of Education. Closely tied to individual development, it brings life into the K-12 curriculum by making it life-centered. The uncertainty of students concerning post-high school activities points up the need for a K-12 career education emphasis. The program is affecting every student in the Watertown district, and the impact of the combined career education thrust is being felt statewide and nationwide. The needs of more students are being met, counselors are becoming aware of the entire range of career counseling activities, and an even broader spectrum of student needs will be met in the future as career education gains momentum as an integral part of the total curriculum.

Schools, to be relevant, must provide occupational preparation from kindergarten through high school and beyond.

ELEMENTARY SCHOOL CHILDREN
ARE ANXIOUS TO EXPLORE ---
EXCELLENT YEARS TO BECOME
AWARE OF OCCUPATIONS

Career education provides a common ground for all students.

The Watertown Public School System, through its Career development Project, is helping students become aware of and prepare for the world of work outside of the schools.

Career education helps a student find direction for his future.

The Career Development Project is South Dakota's exemplary career education program, funded through the U. S. Office of Education in cooperation with the Division of Vocational-Technical Education, Pierre.

The decisions an individual makes regarding a career are uniquely his own.

The project's primary purpose is to help students span the school-work gap by making information on occupations an integral part of the curriculum, kindergarten through high school. The program also helps disadvantaged students and identifies and assists potential dropouts. Intensive occupational counseling is provided for junior and senior high students.

Many students feel alienated from school because they don't see the relationship of their studies to life.

The South Dakota Program is designed to meet the full range of needs of each student -- for the majority who won't finish, or even begin college, and for those who will.

*Counselors have a heavy
responsibility to change
attitudes of parents, teachers,
and students toward career
education.*

-- Dr. Dave Livers, U of Ill.

*Career education is integrated
into existing educational
programs.*

*We have increased the subject
matter content of our classes,
but have forgotten to make
them relevant.*

*-- Dr. Duane Brown,
U of W. Va.*

The Career Development Project is designed to create change in two major areas: counseling, through an inservice program for counselors within the district and statewide, and curriculum, through a K-12 program of occupational information, orientation, and exploration.

The Project is in four phases. The first, hiring of staff, also included in-depth activity and planning and securing of resource materials. Phase two involved orientation of the entire district staff and developing the function each has in the project. The third phase consists of implementing the various programs. The final phase will involve collecting data and information to be used in project evaluation.

JUNIOR HIGH SCHOOL YOUTHS
EAGERLY PLUNGE INTO
EXAMINING CAREER CLUSTERS

*Career education helps the
student develop a personal
plan for lifelong learning.*

The program is designed to acquaint pupils with the modern world of work where they see the implications of school subjects for occupational roles, improve self-concepts, upgrade achievement and aspirational levels, and involve parents and community in understanding the career development needs of children.

Young people drifting in the wasteland of general education need realistic exposure to the world of work.

-- Dr. Sidney Marland

CAREER EDUCATION
BECOMES MORE INTENSE
THROUGH JUNIOR HIGH
AND BEYOND

Career education must meet the full range of needs of each student.

Career education is mining out the hidden vocational promises of the 70's. The emphasis originates at the national level, but enthusiasm and innovations must come from within the individual school system for a successful program.

... the cost to society for educating young people for employment is less than the cost of remedial training after they have left school.

-- National Advisory Council on Vocational Education

Career development isn't a single event in a student's life, but rather a process that begins in kindergarten (or long before) and is closely tied to individual development.

Career education is the ongoing process of integration of self and society, through work, lasting one's entire life.

Career development establishes a practical motivating force for the student who wonders, "what good is school for me?" To answer this question, Watertown is helping students build on their strengths by integrating information about all useful careers into every phase of the curriculum at all grade levels. A broad knowledge of occupations and specific job skills are vital to meeting the demands of the nation's economy. Many of the most exciting career options -- both present and emerging -- are in areas where talents other than those required for college are important.

Elementary children see themselves doing work that captures their imaginations, within the framework of jobs they recognize.

Career education grows out of my belief that our schools should be doing more to build self-reliance and self-sufficiency, to prepare students for a productive and fulfilling life.
-- President Richard Nixon

We believe that career education be provided from early childhood through adult life but of a nature appropriate to each individual as he needs it, wants it, and can profit from it.
-- NEA Task Force

Field trips, extensive application of everyday life situations, and relating the K-6 program is stressed.

Effective career education equips young people to live their lives as fulfilled human beings.

Research and experience dictate that career development activities begin at the elementary level. The 1,900 students in the six Watertown elementary schools explore their values, attitudes, talents, and interests in relation to the wide range of educational and career options. Students focus on career development before entering junior high school so they can develop attitudes toward their futures that will guide them through their remaining years in school and beyond.

MANY FORCES -- HOME, SCHOOL, COMMUNITY, AND PERSONAL TRAITS --- SHAPE A STUDENT'S CAREER DECISIONS

The emphasis of career exploration programs at both elementary and junior high levels is on individual development, rather than on career selection. The need for individualizing instruction is keenly felt and practiced, since the decisions an individual makes regarding a career are uniquely his own.

Various strategies are used to accomplish the Project's goals. Occupational information is integrated into the K-6 curriculum through field trip guidelines, math, reading, art, dramatic, literary and musical curriculum ideas and materials relating to career development; through a revised testing program; and through a study of the career life models of a variety of people. Interest surveys in the sixth grade help students become aware of their growth as individuals.

While basic academic skills are being polished, junior high students are encouraged to assess and develop talents and interests.

Career clusters provide guidelines for a student to see how his skills and aptitudes can be used in a career.

Career clusters expose students to the wide range of occupations within a common interest area and puts students in a better position to adapt to future changes in the job market.

The 15 Career Clusters:
Health occupations,
marine science, environment,
consumer and homemaking,
personal service, hospitality
and recreation, construction,
manufacturing, transportation,
communication and media,
public services, marketing and
distribution, agri-business and
natural resource, business
and office occupations.

In high school a student can begin to tailor his course of study to meet his needs.

In the junior high school all students have an opportunity to explore many kinds of careers through exposure to career clusters and to examine the education or training needed to enter them. The transition to career education in the junior high school is one of increasing tempo and intensity. Here students can build on the career awareness base they developed in the elementary grades. The emphasis becomes much more of a direct correlation between specific disciplines and the world of work. Despite the more specialized approach, each student's course of study is still designed to allow him thorough exposure to all of the career clusters. Coupled with an effective occupational guidance program, the intent is to help a student prepare himself for the career decisions awaiting him.

Senior high students can explore one or more of the career clusters in depth, and focus on specific decision-making situations. A realistic understanding of careers results as a direct relationship is created between studies in school and skills required for a specific career choice.

SENIOR HIGH SCHOOL
STUDENTS FOCUS OF SPECIFIC
DECISION-MAKING SITUATIONS

STUDENTS LEAVING HIGH SCHOOL FIND MANY EDUCATION AND EMPLOYMENT AVENUES OPEN TO THEM

*Education cannot be separate
from preparation for life.
-- Dr. Orville Schmieding,
SDSU*

A sound knowledge base for making career decisions is built as each student develops his course of study to meet his particular goals and interests. A major goal of the program is to bring occupational choices more into line with career opportunities.

*Career education helps
students develop attitudes
about the personal, psycho-
logical, social, and economic
significance of work.*

Specific career exploration, and training centered on career clusters, is provided to 500 eleventh and twelfth grade students from Watertown and eleven surrounding communities in the Multi-District Career Center.

*A wide variety of experiences
in all fields is necessary for
students to recognize
their own skills.*

*Multi-media learning
approaches meet the wide
range of learning styles and
skills among students.*

Career information, orientation, and exploration is provided all students, 7-12, through occupational information centers incorporated into the guidance offices. This multi-media approach gives students an opportunity to explore and discuss their interests and attributes in relation to occupations.

A program for potential dropouts provides the disadvantaged student an opportunity to evaluate himself and to begin building his future.

Guidance and counseling activities help the student develop self awareness, and help him match his interests and abilities against potential careers.

Many young people enter the job market without the skills and attitudes employers require.

A program for potential dropouts gives the disadvantaged student an opportunity to evaluate his own situation and to begin building his future through specialized study and work experience.

The career development effort in Watertown is bringing the teacher - counselor team into a closer working relationship, and the counseling emphasis is beginning to shift into a classroom setting.

EXPOSURE TO OCCUPATIONS K THROUGH 12 HELPS YOUTHS MAKE DECISIONS THAT WILL RESULT IN REWARDING CAREERS

Career education lasts throughout life, stimulating people to constantly reassess needs and values, and to take advantage of adult education programs.

Helping

**Career Development Becomes
Part of K-6 Curriculum**

K-6 schools in Pontiac, Michigan, are now incorporating career development programs into their curriculum. Teachers are being trained to help students develop career goals and interests from an early age.

Marked teachers during the training session.

Helping Johnny Mechanic Conquer English

Career Education and Career Choice

As Dr. Hoyt sees it, better education means guaranteeing students a wide choice of content, educating them to make wise decisions, and insisting that absolutely true to this is the article in the text of Dr. Hoyt's speech to the Southern Division of the AVA Convention last December.

from
The President's
State of the Union Message

Too often, this has not been happening. Too many of our students, from all income groups, have been "turning off" or "tuning out" on their educational experiences. And, whether they drop out of school or proceed on to college, too many young people find themselves unmotivated and ill-equipped for a rewarding social role. Many other Americans, who have already entered the world of work, find that they are dissatisfied with their jobs but feel that it is too late to change directions, that they already are "locked in."

The present approach serves the best interests of neither our students nor our society. The unhappy result is high numbers of able people who are unemployed, underemployed or unhappily employed on the one hand while many challenging jobs go begging on the other.

Career education provides people of all ages with broader exposure to and better preparation for the world of work. It not only helps the young but also provides adults with an opportunity to adapt their skills to changing needs, changing technology and their own changing interests. It would not prematurely force an individual into a specific area of work but would expand his ability to choose wisely from a wider range of options. Neither would it result in a slighting of academic preparation, which would remain a central part of the educational blend.

There is no more disconcerting waste than the waste of human potential. And there is no better investment than an investment in human fulfillment. Career education can help make education and training more meaningful for the student, more rewarding for the teacher, more available to the adult, more relevant for the disadvantaged, and more productive for our country.
